Improving Agility and Flexibility

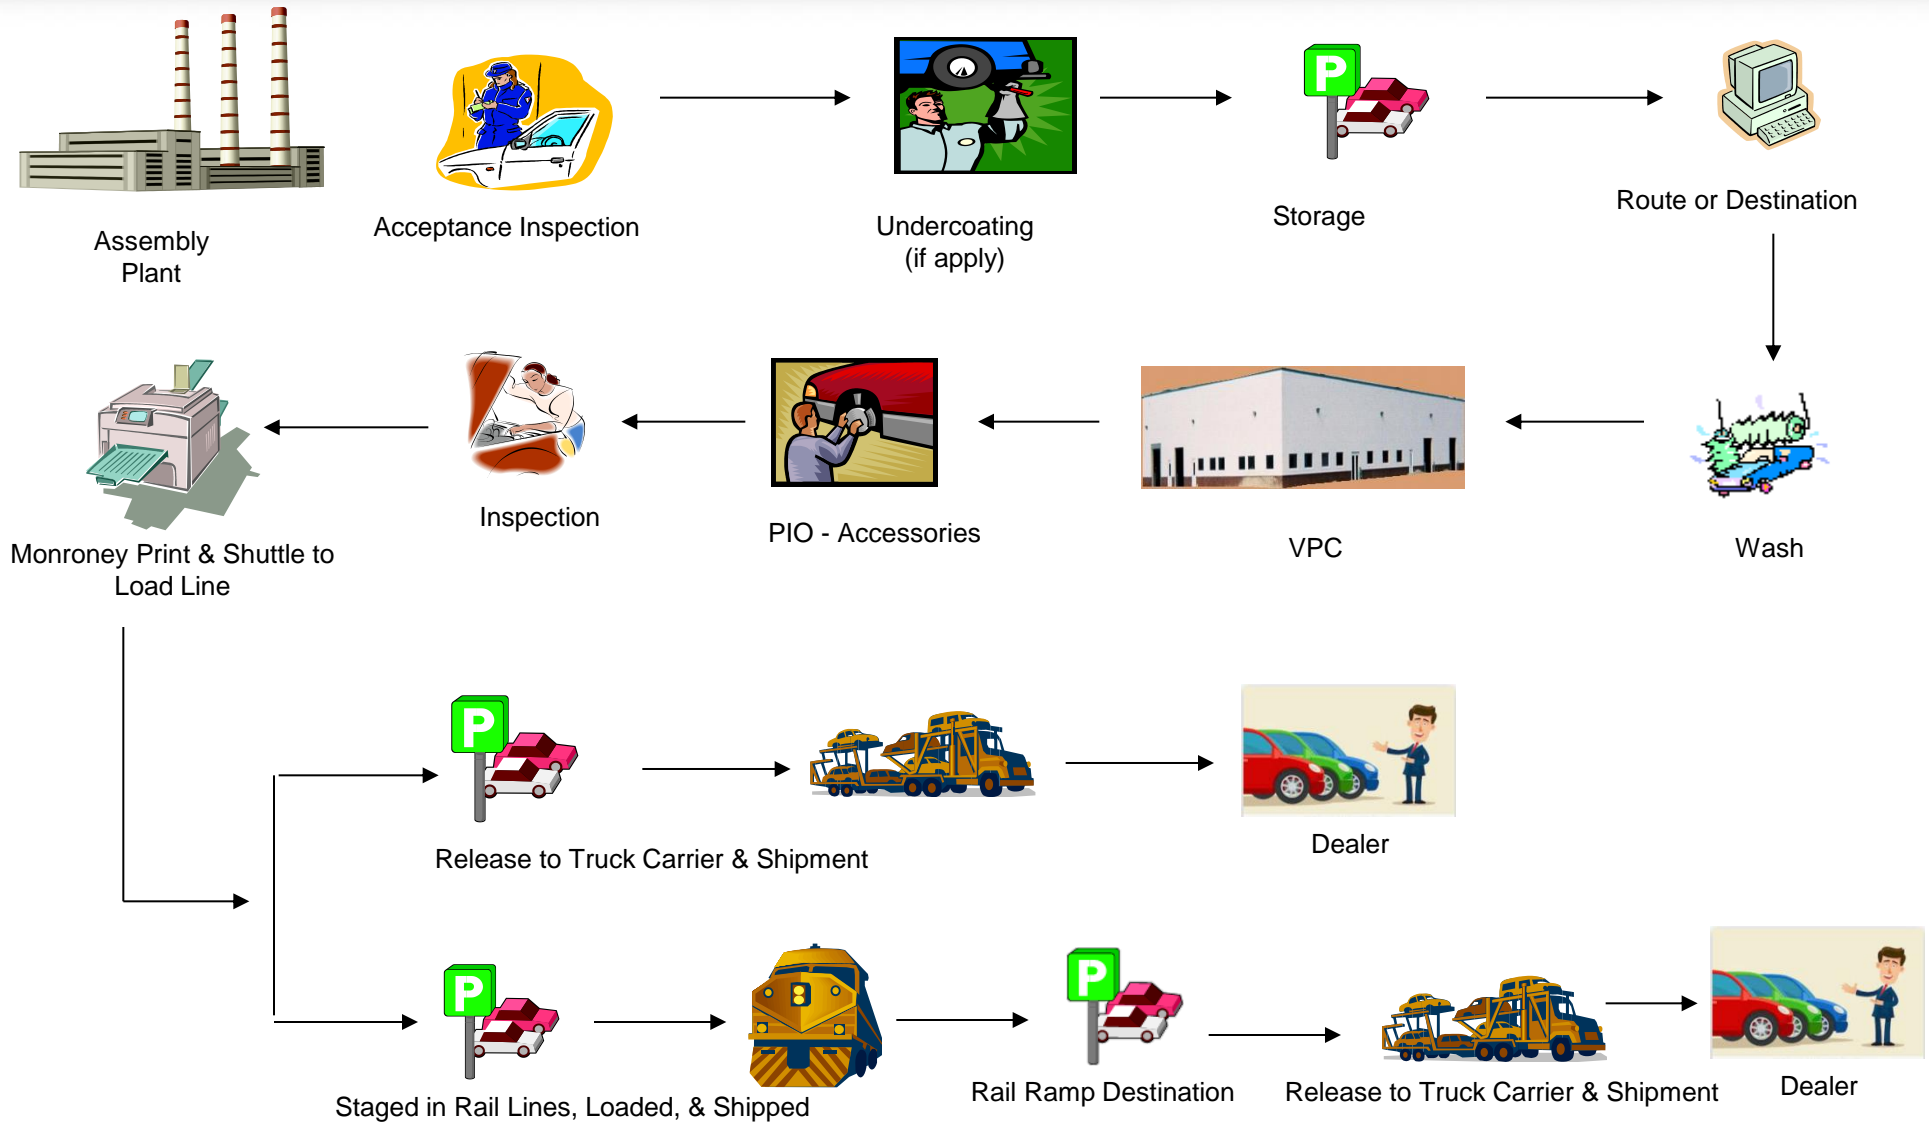

2020.09.15

Glovis Mexico

Agility and Flexibility

Basic Processing Flow

All members involved on daily Operations are important to be informed

GPS location, system validation and electronic devices help us to reduce response time

Consolidate all logistics process into one system reduce time response for internal and external customers

Traceability is essential to identify opportunities

Quality requirements were increased during Pandemic

Market variances reduce resources and increase demand

Invest on quality will be long term for our company or just to achieve customer requirement; relationship will continue until when?

Logistics services with Quality give us satisfaction that is priceless and usually is followed by new volume or customers
